in the same domain that does something similar to the goal of your app.

International Wealth Visualizer- Lightning Demo

Group 18

1. Notes (Group)

Look at all of the artifacts and documents that have been created so far. What is the goal of the app? What are the features of the app?

A. Goals

- Provide info regarding a country's GDP, GNP, GNI, Cost of Living, and currency
- Implement a currency converter
- Allow users to view the GDP, GNP, GNI, Cost of Living, and currency based on country, region, and continent (for region and continent we will provide the average, max, and min)
- Provide an interactive map where users can hover and click on a continent, country, or region and be given all the data regarding that continent, country, or region
- Implement a personalization component to allow users to keep track of continents, countries, or regions

B. Features

- Sign up page
- Login page
- Interactive map
- Currency converter (we can include drop down and a text box where user can manually enter amount)
- Graphs/Visuals
- Simple Logo Banner/Homepage
- Tabs with dropdown menu

2. Ideas (Group)

Identify top non-intuitive features from the feature list and assign each to at least two members. An intuitive interface would be a login interface. An example of a non-intuitive interface would be an interface that uses visualization to achieve a feature. E.g. in a car sharing app how would you visualize the available vehicles to users.

- Interactive map- Niara Parker, Levi H
- Graphs- Niara Parker
- Visuals- Shawn O'Hara
- Currency converter- Levi H
- Drop Down menu for Interactive map that allows users to specify if they want to select by Continent, region, or country- Niara Parker, Levi H
- Drop Down menu for website page- Shawn O'Hara
