

Design Sprint 1 (Individual)

1. Scenarios (User Map)

2. User Stories

- As a student, I want to be able to easily understand the GDP of any country.
- As a traveler, I want to be able to easily find out what the currency of the country I'm travelling to is
- As a user, I want to be able to compare currencies and see how much one currency is worth compared to other currencies
- As a new citizen, I want to find out what the cost of living is in the country that I have moved to recently
- As a user, I want to have clear visual representations of all the financial data of a country
- As a student, I want to have a map where I can click on a continent and get the average GNI of that country
- As a International Business student, I want to be able to convert currencies to see which one is worth more

3. Feature List

- Implement a World Map and a drop down menu that allows users to select if they want to gain info on average of the region, continent, or country
- We want to include a optional sign-up/login page
- We want to create a currency converter
- We want to allow the user to search up specific countries
- We want to include charts/graphs that compares countries/regions/continents
- We want to include a personalization feature that allows users to select specific countries/regions/continents to keep track of
- We want to provide financial data regarding a countries GDP, GNP, GNI, Cost of Living, and the countries form of currency
